MaxDisc[®] Endoscopic system

Contained disc herniations treatment system

www.max-more.com

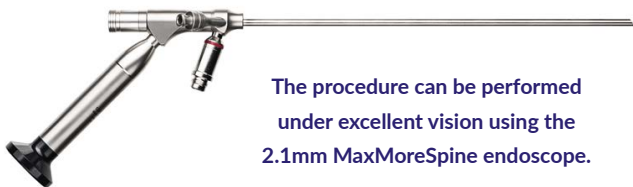

MaxDisc® provides treatment for patients who have failed conservative care and are not yet ready for major surgery. It is a minimal access procedure performed on an outpatient basis. Following manual removal of the offending herniation, the MaxDisc® device is activated to help clean the disc and seal tears in the annulus. As a result, pressure in the disc is reduced, which eases symptoms.

The MaxDisc® system with a 2.1 mm endoscope for performing minimally invasive discectomy procedures for contained lumbar spine herniations. Our innovative technique and design combines a safe and rapid procedure with outstanding clinical results. The fast, safe and precise procedure for bulging discs, contained herniations and degenerated discs.

Clinical indications

- Intervertebral disc protrusion >3 mm
- Annular fissures
- Acute / Chronic
- Discogenic pain

The goal of this treatment modality is to remove chronic pain generating nerve endings. This intervention can be performed under vision using 2.1 mm MaxMoreSpine® endoscope. MaxDisc® is a truly visualised minimal access system for treatment of Discogenic Back & Leg pain.

The procedure can be performed under excellent vision using the 2.1mm MaxMoreSpine endoscope.

BENEFITS OF THE MAXDISC® PROCEDURE:

- Very small incision in the skin, virtually no scar tissue
- Procedure can be carried out under local anesthetic
- Reduced risk of infection
- Long-lasting absence of pain
- Swift return to normal activities
- It is an outpatient procedure
- Short procedure time
- Multiple treatment options
- Targeted access to damaged area
- Treatment of multiple disc levels
- Preserves all additional surgical treatments if necessary
- Safer, faster and more precise with direct visualisation through an endoscope

CONSEQUENCES FOR YOUR EVERYDAY LIFE

Bulging discs, contained herniations and degenerated discs can cause grueling back pain that leads to reduced mobility and a lower quality of life.

TALK TO YOUR DOCTOR

Since the causes of back pain are varied and sometimes multiple, only your doctor can give you information about the pain relief you can expect in your individual case.

The information in this brochure is intended to help you to communicate with your doctor on a well-informed basis, so you can make a decision about treatment with the MaxDisc® system.

Before receiving any treatment, your doctor should confirm that your pain is being caused by a bulging disc, a contained herniation or a degenerated disc.

This brochure provides information about your disease and how the treatment will be performed.

Please consult your treating physician for further details on the procedure and whether this treatment may be a suitable therapy for you.

It is important to discuss the available therapy options with your doctor to make the right decision about the best therapy for your situation.
